SUMMARY

Laravel Developer with 7 years of experience in building scalable web applications and APIs. Proficient in PHP, MySQL, and Laravel, with expertise in user authentication, payment gateway integration, and performance optimization. Holds a Bachelor's degree in Software Engineering and excels in delivering clean, efficient code to meet business needs.

EXPERIENCE

Full Stack Laravel & React Developer

Intelygic

December 2024 - Present, Karachi, Pakistan.

- Collaborated with a cross-functional team to design and develop a Quality Management System (QMS) using Laravel 11 and React 18, contributing to scalable architecture and efficient system performance.

Senior Full Stack Developer

Innovative Network Pvt. (Ltd)

July 2024 - November 2024, Karachi, Pakistan.

- Assisting in developing a ERP Management System using Laravel controller in the MVC model for a sales/purchase finance management system.

Full Stack Developer

Shispare Pvt. (Ltd)

July 2022 - July 2024, Karachi, Pakistan.

- Assisted in developing a Warehouse Management System for warehouse check-ins and check-outs using Laravel REST API and Angular.
- Developed an Order Management System for efficient order processing using Laravel Sage API and MySQL. Integrated Laravel APIs and MySQL for tracking inventory and managing orders in warehouse operations

Full Stack Developer

Golpik

August 2021 - July 2022, Karachi, Pakistan.

- Assisted in developing a Laboratory Management System that allows patients to access their medical reports and purchase recommended products based on their condition. Integrated stripe payment gateway, quis API, and MySQL to facilitate navigation of medical reports.

Full Stack Developer

Hundred Alpha

February 2020 - August 2021, Karachi, Pakistan.

- Assisted in developing a Real-state Sell/Purchase website through which one can easily navigate, sell, and purchase property utilizing Laravel's MVC pattern, Integration of frontend to backend, and MySQL, helping to navigate property prices and meeting place for buyers and sellers.

PHP / Laravel Developer

Brandsman

September 2019 - January 2020, Karachi, Pakistan.

- Developed and deployed a Labor Management System through which labor's presence on different construction sites can be managed utilizing HTML, CSS, Bootstrap, Laravel, JavaScript, J-Query, and MySQL, leading to a manageable labor deployment.
- Developed and deployed a Study Oriented MCQs website through which students can test themselves through practice papers utilizing HTML, CSS, Bootstrap, Laravel, JavaScript, and MySQL helping students for their exams.

Web Developer (Internship)

Cyberxify

March 2019 - June 2019, Karachi, Pakistan.

- Assisted in the development and deployment of a dynamic single page marking site utilizing HTML, CSS, Bootstrap, JavaScript, and J-Query.

PROJECT

Adaptive QMS

Intelygic • demo.adaptiveqms.com/login • December 2024 - Present

- Contributed to the development of a Quality Management System (QMS) by building HR modules, job description workflows, and document control features using Laravel and React, including access control, reporting, and audit trails.
- Implemented rich text editing (Jodit) and version comparison systems with diff-based tracking, enabling efficient document revisions, change visibility, and collaboration across modules.

Al-ahil

Innovative Network Pvt. (Ltd) • al-ahil.erpolutionz.com/ • July 2024 - November 2024

- Developing an ERP stock management system using Laravel, enabling efficient inventory tracking, stock level management, and real-time updates. Integrated features such as warehouse management, automated reordering, and detailed reporting, with secure role-based access control and scalability for handling large inventories.

Ceva Vision

Shispare Pvt. (Ltd) • cevavision.spherewms.com

- Warehouse Management System (WMS) to optimize warehouse operations by tracking inventory, managing orders, improving storage utilization, and enhancing shipping processes. Integrate the third-party API, OneView, to sync data and enhance functionality. Implement features for inventory management, order processing, storage optimization, and real-time shipping information.

Digicom

Shispare Pvt. (Ltd) • develop.digicom.nonprod.spherewms.com/

- An Order Management System (OMS) is software that automates and streamlines managing customer orders. It centralizes order information, tracks inventory, and facilitates order processing and fulfillment for improved efficiency and customer satisfaction. Integration with the third-party API, Sage, will ensure data synchronization for improved efficiency

SphereWMS

Shispare Pvt. (Ltd) • www.spherewms.com/

- The Spherewms is a Warehouse Management System that is an essential tool for warehouses of all sizes, enabling them to operate efficiently, reduce operational costs, and provide excellent service to customers. By optimizing warehouse processes and inventory management, the WMS plays a vital role in the success of modern supply chain operation

Beyond B-School

Gopik • beyondb-school.com/

- A Campus Management System for multiple branches of schools is a software solution that centralizes administrative tasks, academic processes, and communication across different school campuses. It streamlines student information management, staff administration, academic operations, and financial management, and facilitates effective communication within the school network.

LIT (Laboratory Integrated Testing)

Golpik • laboratoryintegratedtesting.com

- A Laboratory Management System (LMS) is software that automates and centralizes laboratory operations. It helps with sample tracking, data management, resource allocation, and compliance, improving efficiency and accuracy in lab processes the system will fetch data using third-party API ("Que" is for generating the test report and "Stripe" for payment)

Jagah Online

Hundred Alpha • www.jagahonline.com/

- It's a real estate business application available in both Mobile and Web applications. Developed in HTML and CSS (Bootstrap) for frontend and PHP (Laravel Framework) for the server side. As for the backend MYSQL relational database is used.

Labor Management System

Brandsman • ayubipaints.com/ls/login

- It's a simple labor management system, where the admin can save records for Labour Visit (i.e. address/location and date vise) on-site
